What it lacks When you select a picture, the application offers a very limited selection of pre-built text options. You cannot select text with a different font or size. Moreover, you cannot add a shadow, so the watermark will not cast a shadow over the rest of the photo. The picture will not be a big enough eye-catcher. On the plus side, you can apply multiple watermarks and change the desired text appearance and position. You can modify the text color, font, and size to your heart's content. User reviews I haven't got the chance to test this application but it looks very promising, especially when it comes to its price. It would be great to have a 100% money back guarantee with a trial version so I would not waste my money on it if I'm not satisfied. ImageSign is a small Windows application whose purpose is to help you stamp all your images with text or date watermark at the same time. User interface You are welcomed by a straightforward GUI that offers quick access to the files and folders stored in your computer, so you can easily select the directory that contains the photos that you want to process. On the downside, the tool works only with the JPG file format, so you cannot upload pictures with other formats (e.g. GIF, PNG, BMP, TIF). When you perform a left-click mouse operation on the desired folder, the program automatically builds up a list with the JPG items. What's more, you can preview the pictures in a small panel. Embedding watermarks ImageSign gives you the possibility to create watermarks by adding the file date or user-defined text message on the images. Additionally, you may change the text in terms of font, size, and color, pick the desired position of the watermark, as well as preview the output file in a dedicated window. The program offers support for batch operations, which means you can add multiple files and process them at the same time. Performance Tests revealed that ImageSign carries out a task quickly and provides very good output results. It is quite friendly with system resources, so the overall performance of the computer is not affected. What it lacks You cannot drag and drop the custom text or date to the desired position on the photo, insert shadows, embed 3D text messages, create image watermarks, and work with multiple layers. Bottom line All things considered, ImageSign offers a straightforward software solution when it comes to helping you apply text or date watermark on your JPEG images on the breeze, so as to remember the date and location. I haven't got the chance to test this application but it looks very promising, especially when it comes to its price. It would be great to have a 100% money back guarantee with a
