Free ad-free download. The latest stable version of Agora-
Drugs. A: A text file is just plain old text. You can save it
as an ASCII file (*.txt). While you are at it, you might also
want to look into using "Code Web Components" so you
don't have to work with data file formats like this as
much. I also realize you are writing the app for Windows,
but I am sure there is a way to do what you need using
the various technologies available. You can use your text
file as a template for code and wire up the logic needed
for things like what, when, where. Show HN: An
automated conversation generator in Python - mck-
===== mck- My previous app: [This is a similar app
but with an emphasis on Python. There's no webhook
required. The bot will ask you about things on /r/trees or
reddit.com/r/explain or whatever. On each question it will
automatically generate an answer. You can send a
message to the bot with any kind of instructions. You can
easily make a bot by for example asking random
questions of an audience of students. You can also make
a bot that responds to every comment of a certain user.
You can turn it into an online store. Or put an order
engine in it. Build a bot for your own chat service. Of
course, you can always fiddle with it. For example, this
version adds a topic command. If you type topic:space, it
will ask you a question about space. This is version 1.0,
so there are some rough edges. I am looking to make a
version 2.0. Q: Detail about the result of reduce in R for
