To create a new drawing, you used the create command with a new drawing name, and a new drawing template. Because of this, AutoCAD was originally referred to as "Automatic CAD". Version 1.1 introduced "Draw" commands and "Undo" commands. Drawing commands supported various drawing tools, such as the circle tool. "Undo" commands were used to undo drawing commands. Version 2.0 was the first version released in the Autodesk Design Suite. It introduced the "Zoom" command, which was later included in the "Export" command. In version 3.0, AutoCAD switched to the Window environment, with all drawing commands within a window. This introduced user-defined "palettes" for creating many of the standard tools. In version 3.5, the toolbar was relocated to the top of the window and drawing commands were moved to the bottom of the window. Version 4.0 introduced powerful model space drawing tools and coordinated drafting and other 2D drawing functions. In version 5.0, the "Space" commands were removed in favor of the "Draw" commands.
