The simplified version of the main menu bar has been organized around a list of features (Figure09); a right-edge pull down menu keeps them at your fingertips. The left-edge pull-down menu has three options: Profiles, History, and Toolbox (Figure10). The old menu layout has been left as such for the likely conservative customer who prefers a classic media way of doing things. New reviewers and power users, however, welcome the reorganization. And it is to these users, that CS6 is most similar to Photoshop. Longtime users will feel at home. In the past, a right-click on an image brought up the version information. Now the contrast in light and dark is much greater, however, and so is the resolution of the menus. Details flavors the growth of CS6. But not all details have been elevated. For example, opening a file's metadata doesn't take longer but doesn't require more input. As a side benefit, you can't tab to an image to open it anymore.

Also, "Edit" is now "Develop," to be more in line with Lightroom. Photoshop's history of naming operations has become less clear. Historically, it has been "Photoshop" and "Photo" but now "Take Greatest Shot" and "Layer" are found in the Graphics menu. Also, "Adjustments" takes the place of "ImageAdjustments" on the Edit menu. And "Blur" and "Straighten" are now "Distorts" and "Layers." Photoshop's Names tab in the dialog box has been renamed to "Label"; so have the Labels tab in the Property Editor. In the past, most dialog boxes were monochromatic, with the exception of the Layers panel, which was full color. Now, many dialog boxes are three-panel (Figure11), with the exception of the Move Tool and Selection Tool. All colorization is just one button press away. Double-click the drag handle (the fingernail icon) to set the inverse of the active gradient. In the Layers panel, you can see the color of the image at the top and the color of the layer below. You can see the color of the original image at the top left (Figure12). Work from the top layer down in the Layers panel. To "draw" a layer below a layer that is set to lock or mask on, first make sure you're working on a layer that is set to lock or mask on. Then use the Type icon to select a gradient, if needed.
